

Training

Concept Systems now offers courses focused on PLC-based control systems in a manufacturing environment. The training covers the basics of PLC control, hydraulic linear motion control and is heavily focused on labs and actual applications.

HIGHLIGHTS:

- ControlLogix Training
- Delta Motion Control Training
- PLC Training
- RSView Training
- Sawmill Training
- Application specific training; send us your application and we will tailor the course for your specific needs

Comprehensive **Training Courses** for Mill Maintenance Technicians & Engineers.

Upon completing the course you will be able to...

- Go online with your PLC
- Identify and search physical I/O addresses in a PLC
- Make basic edits to 'jumper' or 'force' I/O problems
- Create memory/registers tags
- Troubleshoot network problems
- Replace and configure hardware
- Wire and test your own PLC ladder logic
- Troubleshoot and adjust the tuning of a linear positioner

Send us your PLC application and we will tailor the training for your system.

Finally, Training Suited to Your Maintenance Needs.

COURSE DETAILS

The two-day program is extremely hands-on with extensive lab exercises. Each student is provided their own laptop to use throughout the course, no

extra materials required. The course alternates between individual practice labs, demonstrations, group labs and brief lectures.

THE SOLUTION

Whether you are new to PLCs and need an introduction to the technology, or you are an experienced maintenance technician ready to program your own system, the Concept Systems PLC Controls training program has what you need to get your application off to the right start.

Our courses are tailored for maintenance personnel. Our courses are tailored around nuts and bolts troubleshooting techniques, rather than high level programming theories.

Concept Systems understands the importance of having on-site personnel maintain your own systems. That is why we have structured training course tai-

Along with automation technology training, Concept Systems knows successful maintenance depends on good, easy-to-use documentation – from proposals to user manuals and everything in between. With a dedicated technical writing department, rest assured that your project documents will be high-quality, complete, and accurate.
