

Make More at your most critical
Machine Centers by
integrating **Concept Systems**
with your team.

Sawmill/Planermill Controls

For years, **Concept Systems Inc** has been developing state-of-the-art control systems for the sawmill industry. Whether it is motion control, vision inspection, laser scanning, robotics or high-speed printing, isn't it time you looked at the latest proven technologies to maximize your recovery?

HIGHLIGHTS:

Concept Systems' expertise is in identifying machine center deficiencies and developing systems that increase production, reduce waste and/or improve efficiency.

Concept Systems specializes in PLC/HMI controls, motion controls, laser scanning, vision inspection, database systems, mechanical retrofits, robotics and high-speed printing

Providing improved controls on your most critical machine centers:

Log Merchandisers	Trimmer/Sorters
Headrig Carriages	Stackers
C-Frames	Package Outfeeds
Chip-n-Saws	Planers
End-Doggers	Edgers
Gangs	Resaws

Our Core Values

We are an extension of your team. Our goal is to provide a system well suited for your site and application. We will not try to force our standards or preferences on you. We listen to your requirements and tailor a system to fit your needs. We gain repeat customers by the quality of our systems not locking you into our ways.

We follow a detailed Methodology. This establishes clear/defined channels of communication among the project team. This ensures that we listen to your expectations and that you understand our intended deliverables.

No black-box technology — we believe in providing systems built with off the shelf components, not proprietary hardware that can only be supported by one supplier. This results in systems that give you options from a support and upgrade standpoint.

Source code included — we believe in providing the source code with each system we deliver, giving you the tools to support the system yourself.

Standard products — we believe in providing hardware consistent with your site standards, resulting in reduced spare parts inventory and reduced learning curve for your maintenance team.

Take Advantage of proven, State-of-the-Art Technology.

YOUR TECHNOLOGY RESOURCE

Concept Systems' goal is to be the technology resource for your team. As such we work to design systems best suited for your application and your facility. In addition to technical capabilities, issues such as spare parts inventory, capabilities of maintenance staff and price/budget, and local support are considered before making recommendations. We maintain strategic relation-

ships with companies such as Rockwell Automation, Siemens, Cognex, Wonderware, Delta Computer Systems and others to insure product knowledge and support of all the major suppliers. This approach, coupled with our machine center expertise makes Concept Systems the right choice to be the technology resource for your team.

EASE OF USE

You require an automation partner that understands your process and has a proven track record of providing controls on your most critical machine centers. With hundreds of applications under our belt, **Concept Systems** can tailor a system to suit your needs. Our sawmill and planer mill expertise cou-

pled with our technology focus makes us uniquely qualified to handle your most demanding technology challenges. We specialize in identifying equipment deficiencies and employ proven, state-of-the-art technologies to correct those issues.
